FUEL CELL SYSTEM AND CONTROL METHOD

Detailed Action

1. The amendments filed on June 8, 2010 were received. Applicants have amended claims 17, 31 and 32.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

3. The rejections of claims 17 and 19-32 under 35 U.S.C. 103(a) as being unpatentable over Nonobe (US 6,158,537), in view of Kimura et al. (US 5,964,309) and Mufford et al. (US 6,186,254), are withdrawn because claims 17, 31 and 32 were amended.

Reasons for Allowance

4. Claims 17 and 19-32 are allowed.

The following is an examiner's statement of reasons for allowance: The inventions of independent claims 17, 31 and 32 recite a fuel cell system and a method of controlling a fuel cell system.

Claim 17 and 32 recite a fuel cell system including an energy supply with a fuel cell, a power distributor connected to the cell, a secondary cell connected to the cell via the distributor; and, a load set connected to the fuel and secondary cells via the distributor. The load set also includes a controller configured to start a temperature rise promoting operation and perform this operation by alternately repeatedly switching between a first power distribution unit (having a first power generated at the fuel cell and distributed to the secondary cell and the load set) and a second power distribution unit (having a combination of a second power generated at the fuel cell and a third power discharged from the secondary

Art Unit: 1795

cell distributed to the load set) regardless of power consumption of the load set, for promoting concurrent temperature rise of both of the fuel cell and the secondary cell.

Claim 31 recites a control method for a fuel cell system that promotes the concurrent temperature rise of both the fuel cell and secondary battery by alternately repeatedly switching between a first power distribution unit (having a first power generated at the fuel cell and distributed to the secondary cell and the load set) and a second power distribution unit (having a combination of a second power generated at the fuel cell and a third power discharged from the secondary cell distributed to the load set) regardless of power consumption of the load set. The promotion of the concurrent temperature rise of both the fuel cell and secondary battery starts when the fuel cell system is started up and if a warm-up mode is required.

The closest prior art of record, Nonobe (US 6,158,537), Kimura et al. (US 5,964,309), and Mufford et al. (US 6,186,254), do not expressly teach a controller configured to start the concurrent temperature rise of both a fuel cell and secondary battery used in a fuel cell system by alternately repeatedly switching between a first power distribution unit and a second power distribution unit, as recited in claims 17, 31 and 32.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
